

Design Logos in CorelDRAW X4

A Super-Easy Step-by-Step Guide for Beginners & Kids ■

Learn to draw the **WhatsApp** logo and the **OriginOS** logo from scratch — no experience needed!

Before You Start — Make Sure You Have:

- CorelDRAW X4 installed on your computer
- Mouse & keyboard ready
- A blank document open (File → New → OK)
- Zoom level set to 100% (press 1 on keyboard)

■ Part 1 — WhatsApp Logo

Colours to use:

Main Green

#25D366

White

#FFFFFF

What is the WhatsApp logo?

It is a **green circle** with a small tail at the bottom-left (like a speech bubble) and a **white phone** shape inside. We will build it piece by piece!

1 Open CorelDRAW X4

- Click the CorelDRAW X4 icon on your desktop.
- When it opens, go to File → New. A new blank page appears.
- Press F8 to make sure you see the full page.

2 Draw the Big Green Circle

- Click the Ellipse Tool in the left toolbar — it looks like an oval.
- Hold the CTRL key on your keyboard and drag on the page to draw a perfect circle.
- Make it about 8 cm wide. You can check the size in the top bar.

3 Fill the Circle with Green

- Click on your circle to select it (it shows little black squares around it).
- Look at the bottom of the screen — you see a colour bar (rainbow strip).
- Right-click on a green colour (#25D366) in the strip and choose "Set outline colour to none".
- Left-click on the same green colour to fill the inside. The circle turns green!

4 Remove the Black Outline

- Your circle may still have a black border. We need to remove it.
- With the circle selected, right-click the X (cross) at the far left of the colour bar.
- This sets the outline to NONE. The black border disappears. ■

5 Draw the Speech Bubble Tail

- Select the Bezier Tool from the left toolbar (looks like a pen nib).
- Click three points to make a small triangle shape at the bottom-left of the circle.
- Double-click the last point to finish the shape.
- Fill this shape with the same green (#25D366) and remove the outline.

6

Draw the White Phone Shape

- Select the Rectangle Tool (press F6).
- Draw a tall thin rectangle in the centre of the circle.
- Fill it white — left-click the white colour in the colour bar.
- Remove its outline (right-click the X on the colour bar).

7

Round the Phone Corners

- Select the rectangle.
- In the top bar you see corner radius boxes. Type 5 in all four boxes.
- Press Enter. The rectangle now has rounded corners — just like a real phone!

8

Add Earpiece and Mic Details

- Draw a small thin rectangle at the top of the phone shape for the earpiece.
- Draw a tiny circle at the bottom for the microphone dot.
- Fill both shapes with green (#25D366) so they blend with the circle behind them.
- Remove all outlines.

9

Add the Screen Area

- Draw a small rectangle inside the phone body.
- Fill it green so it looks like a screen cutout.
- Remove the outline.

10

Group Everything Together

- Hold SHIFT and click every shape you drew.
- Press CTRL + G to group them all into one object.
- Now you can move the whole logo as one piece. Your WhatsApp logo is done! ■

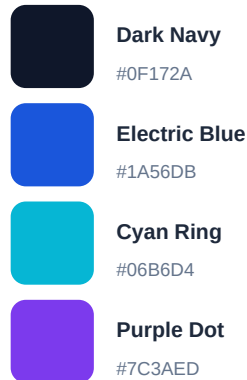

■ Kid Tip:

If your shapes look wobbly, press CTRL+Z to undo and try again. You can undo as many times as you need — there is no limit! Remember: no outline should be visible on the final logo.

■ Part 2 — OriginOS Logo

Colours to use:

What is the OriginOS logo?

The OriginOS logo (by OnePlus / Vivo) is a **dark circle** with a **blue outer ring**, a **cyan inner ring**, and a small **purple accent dot**. It looks futuristic and clean!

1 Start with a Fresh Page

- Go to File → New to open a new blank page.
- Zoom to 100% by pressing 1 on your keyboard.

2 Draw the Dark Background Circle

- Select the Ellipse Tool (press F7).
- Hold CTRL and drag a big circle — about 8 cm wide.
- Fill it with dark navy (#0F172A) using the colour bar.
- Remove the outline (right-click the X on the colour bar).

3 Draw the Outer Blue Ring

- Draw another circle the same size on top of the first one.
- Fill it with Electric Blue (#1A56DB). Remove the outline.
- Now draw a slightly smaller circle — about 6.4 cm wide — on top of it.
- Fill this smaller circle with dark navy (#0F172A). Remove the outline.
- Select both blue shapes. Press CTRL+G to group. You now have a blue ring!

4 Leave a Small Gap in the Outer Ring

- Draw a tiny dark rectangle to cover the bottom-right part of the blue ring.
- This creates the "gap" or opening that makes it look like an arc instead of a full circle.
- Fill the rectangle with dark navy (#0F172A). Remove the outline.

5

Draw the Inner Cyan Ring

- Draw a circle about 4.6 cm wide, centred on the logo.
- Fill it cyan (#06B6D4). Remove the outline.
- Draw another circle 3.8 cm wide on top, fill with dark navy (#0F172A).
- Group them (CTRL+G) to make a cyan ring.

6

Add the Purple Accent Dot

- Select the Ellipse Tool. Draw a small circle — about 0.6 cm wide.
- Fill it with purple (#7C3AED). Remove the outline.
- Place this dot at the bottom-right of the outer ring, where the gap is.
- This little dot finishes the logo look!

7

Centre Everything Perfectly

- Select all your shapes (CTRL+A to select all).
- Go to Arrange → Align and Distribute.
- Click "Centre Horizontally" and "Centre Vertically".
- Everything lines up perfectly in the middle. ■

8

Remove ALL Outlines (Very Important!)

- Select every shape one by one.
- For each shape: right-click the X at the far left of the colour bar.
- Make sure NONE of the shapes have a visible border.
- The logo should look smooth and clean — no lines around any shape!

9

Group the Whole Logo

- Press CTRL+A to select everything.
- Press CTRL+G to group the whole logo.
- Your OriginOS logo is complete! ■

10

Save Your Work

- Go to File → Save As.
- Type a name like "OriginOS_Logo".
- Choose CDR format (CorelDRAW format) to keep it editable.
- Click Save. Well done — you made a professional logo!

■ Kid Tip:

The secret to clean logos: ALWAYS remove outlines! After filling a shape with colour, immediately right-click the X on the colour bar. No visible outlines = professional logo. Check every single shape before finishing.

■ Quick Reference — Keyboard Shortcuts

Shortcut	What it does
F7	Ellipse Tool — draw circles and ovals
F6	Rectangle Tool — draw squares and rectangles
CTRL + drag	Force a perfect circle or square (no squishing!)
CTRL + G	Group selected shapes into one object
CTRL + U	Ungroup — split a group back into separate shapes
CTRL + A	Select ALL objects on the page
CTRL + Z	Undo — go back one step
CTRL + SHIFT + Z	Redo — go forward one step
F11	Open Fill Dialog — type exact hex colour codes
F12	Open Outline Dialog — set outline to None here too
Right-click X	Remove outline from selected shape instantly
Left-click colour	Fill selected shape with that colour
1	Zoom to 100% — see the real size
CTRL + S	Save your file — do this often!

■ Common Mistakes & How to Fix Them

■ Problem	■ Fix
I see a black border around my shape	Right-click the X (far left of colour bar) to remove the outline
My circle is not a perfect circle	Hold the CTRL key while dragging with the Ellipse Tool
I moved the wrong shape	Press CTRL+Z to undo immediately
I cannot find a tool	Look at the left side toolbar — hover over each icon to see its name
My shapes are not centred	Select all (CTRL+A), then Arrange → Align → Centre Horizontally & Vertically
I cannot type the exact colour hex code	Press F11 to open Fill Dialog, then type the # code in the hex box
My logo has a white background	Delete the white rectangle behind your logo if you added one by mistake

■ Congratulations! You are now a Logo Designer!

Share your logos with your friends and family. You made them yourself in CorelDRAW X4
— that is amazing!
